# Assignment- No. 4 HTML + CSS + JavaScript

Create a JavaScript Music Player

Create a music player with a user-friendly UI that plays music in the browser.Use other features as well, including as seeking and volume control.There are several methods available inside the HTMLMediaElement interface that enable playback and control of audio files without the usage of an external library.

To make the player visually appealing, create the HTML layout that specifies the player's structure, style it with CSS, and then write the player logic for all of the functions in JavaScript.
